

## THE COST OF IMPLEMENTING THE LOGISTIC STUDY INTO THE COMPANY

Vergil CIUREA<sup>1</sup>, George BAICOIANU<sup>2</sup>

**Abstract.** *The use of the method of comparisons in time and space has led to the conclusion that the problematic of the material and human efforts made by the implementation of logistics in the company must be based upon a logistic project drawn up for the entire company, a project mobilising a numerous personnel for a long period and which demands the intervention of the logistic operators and managers of logistics, whose activity is also necessary after implementing this project in the company.*

### 1. Introduction

The use of the method of analysis and synthesis corroborated with the method of comparison in time and space highlights that the accomplishment of a logistic project and its implementation into the company, including the establishment of costs it creates, needs a multitude of activities which may be structured thusly:

#### ↳. ACTIVITIES AIMING THE ACCOMPLISHMENT OF AN IMMEDIATE PROFITABILITY

Such activities are based upon three principles, such as: **consideration of globalising the operations as work technique**, meaning the determination of the priority of the processes in relation to their component operations; **intensification of the concerns of coordinating the information with the technological operations**; **synchronising the immediate individual objectives with the finality of the logistic project**. See Fig. 1.
