OBJECTIVE SECURITY

Colonel (r) Professor engineer Eugen SITEANU, PhD[*]

Abstract: It seems that the new world order is collapsing and international security is no longer what it once was because humanity has been concerned with subjective security. That is why we intend to define a new concept of security - objective security based on achieving security awareness. In order to substantiate the science of security and objective security, we must go through the stages explained by Hegel: the stage of consciousness and the reason of security, the stage of the spirit in which reason turns into spirit and the stage of objectifying security. The phenomenology of security is the description of the objective forms in which the science of security appears, of the process of knowing the insecurity / security and the disclosure of errors. In the methodology of the scientific research of insecurity / security it is necessary to never forget that "the truth is the whole", and the phenomena of insecurity / security always become something else. That is why the insecurity / security phenomenon must be analyzed as a historical phenomenon with respect to data and facts, and the insecurity / security knowledge represents a process in which the dialectical method explained by Hegel is used: the security philosophy method is dialectical because the method is the structure of the whole.

Keywords: objective security; subjective security; security science; security phenomenology; dialectical method; security philosophy method.

1. Introduction

The issues of people's and humanity's life and security have been a constant concern for scientists ever since the oldest ages until the present day. Thus, security has been the subject of a significant amount of scientific papers under the shape of various syntagms: minimal security; maximal security; obligatory security; sufficient security; opportune security; absolute security; total security; vital security; optimal security; durable security etc. Other concepts have also emerged, such as complete/thorough
